Journal of Power Sources 65 (1996) 291–293

JOURNAL OF POWER SOURCES

Subject Index of Volume 65

Alkaline rechargeable cells
cellulosic separator applications: new and improved separators for alkaline rechargeable cells, 29
Aluminum
characterization of different grades of aluminum anodes for aluminum/air batteries, 197
Aluminum anode primary batteries
characterization of different grades of aluminum anodes for aluminum/air batteries, 197
enhanced electrochemical performance in the development of the aluminum/hydrogen peroxide semi-fuel cell, 207
Analytical methods
lithium intercalation in low temperature Li–Mn–O compounds: a new monoclinic phase and structural in situ studies, 225
Applications/aerospace
advanced nickel/hydrogen dependent pressure vessel (DPV) cell and battery concepts, 23
bipolar lithium-ion battery development, 133
Applications/aircraft
50 to 100 Ah lithium-ion cells for aircraft and spacecraft applications, 149
Applications/electric vehicles
characterization of different grades of aluminum anodes for aluminum/air batteries, 197
Applications/medical
a systems approach to creating reliable batteries for implantable medical applications, 101
an improved nickel/zinc battery for ventricular assist systems, 109
discharge and safety characteristics of improved low magnetic signature lithium cells, 117
high-rate lithium/manganese dioxide batteries; the double cell concept, 129
Applications/military
solid polymer fuel cells for pulse power delivery, 179
an investigation of hydrogen storage methods for fuel cell operation with man-portable equipment, 187
Applications/portable power
portable fuel cell power generator, 155
Applications/rescue equipment
reliability of lithium batteries in search and rescue beacons, 93
Applications/space
50 to 100 Ah lithium-ion cells for aircraft and spacecraft applications, 149
Applications/submarines
dynamic interaction of a proton exchange membrane fuel cell and a lead–acid battery, 173
Applications/underwater equipment
sea-water battery for subsea control systems, 253
Applications/underwater vehicles
improved silver/zinc secondary cells for underwater applications, 39
enhanced electrochemical performance in the development of the aluminum/hydrogen peroxide semi-fuel cell, 207
Applications/weapons
high-g power sources for the US Army's HSTSS programme, 263

Bipolar electrodes
bipolar lithium-ion battery development, 133
Bromine complexes
rechargeable zinc–carbon hybrid cells, 77

Cellulosic separators
cellulosic separator applications: new and improved separators for alkaline rechargeable cells, 29
Ceramic superconductors
ceramic superconducting materials as intercalation cathodes in secondary non-aqueous lithium batteries, 235

Electrode reactions
performance evaluation of $LaNi_{4.7}Al_{0.3}$ and $LaNi_5$ electrodes used as anodes in nickel/metal hydride secondary batteries by analysis of current transients, 9
performance and characterization of metal hydride electrodes in nickel/metal hydride batteries, 15
Electrolytes/aqueous
electrochemical performance of gelled zinc alloy powders in alkaline solutions, 81
Electrolytes/non-aqueous
electrolytes and additives for high efficiency lithium cycling, 247
Electrolytes/solid polymer
characteristics of a thin film lithium-ion battery using plasticized solid polymer electrolyte, 143

Fuel cells
portable fuel cell power generator, 155
dynamic interaction of a proton exchange membrane fuel cell and a lead–acid battery, 173
solid polymer fuel cells for pulse power delivery, 179
an investigation of hydrogen storage methods for fuel cell operation with man-portable equipment, 187
Fuel cells/solid polymer electrolyte
performance and modelling of a direct methanol solid polymer electrolyte fuel cell, 159

Hydrogen anodes
advanced nickel/hydrogen dependent pressure vessel (DPV) cell and battery concepts, 23
Hydrogen peroxide
enhanced electrochemical performance in the development of the aluminum/hydrogen peroxide semi-fuel cell, 207
Hydrogen storage
an investigation of hydrogen storage methods for fuel cell operation with man-portable equipment, 187

Elsevier Science S.A.

Lanthanum–nickel alloy
performance evaluation of $LaNi_{4.7}Al_{0.3}$ and $LaNi_5$ electrodes used as anodes in nickel/metal hydride secondary batteries by analysis of current transients, 9
Lead–acid batteries
development of an electrode for lead–acid batteries possessing a high electrochemical utilization factor and invariable cycling characteristics, 71
dynamic interaction of a proton exchange membrane fuel cell and a lead–acid battery, 173
Lead–acid secondary batteries/general
negative corrosion of lead–antimony alloys in lead–acid batteries at high temperatures, 65
Lead battery plates
negative corrosion of lead–antimony alloys in lead–acid batteries at high temperatures, 65
development of an electrode for lead–acid batteries possessing a high electrochemical utilization factor and invariable cycling characteristics, 71
Lithium anodes
electrolytes and additives for high efficiency lithium cycling, 247
Lithium-ion batteries
characteristics of a thin film lithium-ion battery using plasticized solid polymer electrolyte, 143
Lithium-ion secondary batteries
bipolar lithium-ion battery development, 133
50 to 100 Ah lithium-ion cells for aircraft and spacecraft applications, 149
investigations of lithium manganese oxide materials for lithium-ion batteries, 227
high-g power sources for the US Army's HSTSS programme, 263
Lithium primary batteries
reliability of lithium batteries in search and rescue beacons, 93
a systems approach to creating reliable batteries for implantable medical applications, 101
high-rate lithium/manganese dioxide batteries; the double cell concept, 129
Lithium primary batteries/iodine
development of an equivalent-circuit model for the lithium/iodine battery, 121
Lithium primary cells
discharge and safety characteristics of improved low magnetic signature lithium cells, 117
Lithium secondary batteries
a safe, fast-charge, two-volt lithium/polymer cathode 'AA'-size cell with a greater than 250 Wh kg^{-1} energy density, 213
lithium rechargeable envelope cells, 219
ceramic superconducting materials as intercalation cathodes in secondary non-aqueous lithium batteries, 235
a novel rechargeable lithium composite cathode system, 241

Magnesium anode reserve batteries
sea-water battery for subsea control systems, 253
Manganese dioxide
nickel hydroxide and other nanophase cathode materials for rechargeable batteries, 231
Manganese oxides
lithium rechargeable envelope cells, 219
lithium intercalation in low temperature Li–Mn–O compounds: a new monoclinic phase and structural in situ studies, 225
investigations of lithium manganese oxide materials for lithium-ion batteries, 227
Mathematical modelling
diagnostic analyses for mechanisms of self-discharge of electrochemical capacitors and batteries, 53
development of an equivalent-circuit model for the lithium/iodine battery, 121
performance and modelling of a direct methanol solid polymer electrolyte fuel cell, 159
Metal hydride anode batteries
nickel/metal hydride technology for consumer and electric vehicle batteries — a review and up-date, 1
Metal hydrides
performance evaluation of $LaNi_{4.7}Al_{0.3}$ and $LaNi_5$ electrodes used as anodes in nickel/metal hydride secondary batteries by analysis of current transients, 9
performance and characterization of metal hydride electrodes in nickel/metal hydride batteries, 15

Nanophase materials
nickel hydroxide and other nanophase cathode materials for rechargeable batteries, 231
Nickel oxide batteries
advanced nickel/hydrogen dependent pressure vessel (DPV) cell and battery concepts, 23
Nickel oxides
nickel hydroxide and other nanophase cathode materials for rechargeable batteries, 231

Organosulfur cathodes
a safe, fast-charge, two-volt lithium/polymer cathode 'AA'-size cell with a greater than 250 Wh kg^{-1} energy density, 213

Performance
rechargeable alkaline manganese dioxide cells. A test report, 87
Polymer electrolyte membrane
portable fuel cell power generator, 155
Proton exchange membrane
dynamic interaction of a proton exchange membrane fuel cell and a lead–acid battery, 173
solid polymer fuel cells for pulse power delivery, 179
an investigation of hydrogen storage methods for fuel cell operation with man-portable equipment, 187

Reliability
reliability of lithium batteries in search and rescue beacons, 93
a systems approach to creating reliable batteries for implantable medical applications, 101

Safety
discharge and safety characteristics of improved low magnetic signature lithium cells, 117
Safety reviews
high energy battery safety: anecdotes, issues and approaches, 271
Separators
cellulosic separator applications: new and improved separators for alkaline rechargeable cells, 29
Silver oxides
new developments in very high rate silver oxide electrodes, 47
Sulfur
a novel rechargeable lithium composite cathode system, 241
Supercapacitors
diagnostic analyses for mechanisms of self-discharge of electrochemical capacitors and batteries, 53
effects of three-dimensional current collectors on supercapacitors' characteristics, 61

Transition metal oxides
a novel rechargeable lithium composite cathode system, 241

Zinc/nickel oxide secondary batteries
an improved nickel/zinc battery for ventricular assist systems, 109
Zinc/silver oxide secondary batteries
improved silver/zinc secondary cells for underwater applications, 39
Zinc anode reserve batteries
new developments in very high rate silver oxide electrodes, 47
Zinc anode secondary batteries
rechargeable zinc–carbon hybrid cells, 77
rechargeable alkaline manganese dioxide cells. A test report, 87
Zinc electrodes/gelled
electrochemical performance of gelled zinc alloy powders in alkaline solutions, 81
